SafePost 70

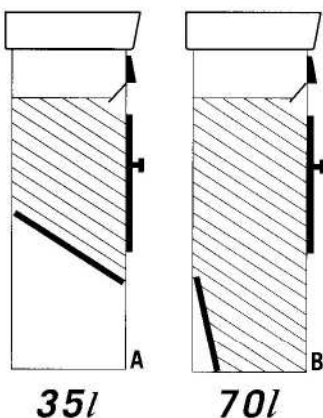

It is made of an extremely robust (1.5 mm) electro-galvanized steel plate. For extra security, the sheeting on the top of the box, as well as the drop and access door are extra thick (2.0 mm). The surface is stove enamelled to effectively withstand extreme weather conditions.

In other words, your post is secure and protected from variable weather conditions as well as unwelcome visitors.

Specifications: Height 1000 mm. Width 350 mm. Depth 240 mm.

Weight: 13 kg

Colours: Black, green, brown, white, blue, red, and russet as well as stainless steel.

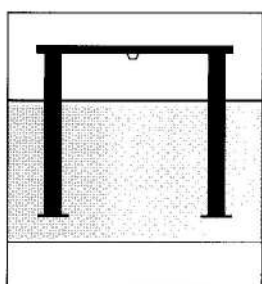

After you've been away from home for just two or three days, your normal letter box will already be full. This signals that you are not at home and invites unwelcome visitors.

SafePost has a removable middle shelf so that the letter-box is easy to adjust according to the amount of expected mail.

For everyday use, when you are at home, simply put the shelf at the higher level (A). This gives you a convenient letter-box that is easy and quick to empty.

Before going away for a holiday, for example, just put the shelf at the bottom of the box (B). You then have a secure means of collecting your post with a four-week storage capacity for letters, papers and advertisements.

**Double your storage volume in a split second!
It's impossible for anyone to see whether you have any post or not.**

The raised support structure is also made of the same robust material.

The support structure enables you to mount the letter-box at the height of your choice above ground level so that the letter-box does not touch the ground at all.

Both the drop and the access door will then be at a higher position, which in certain cases could be more convenient and necessary.
